

Mouse pad NOVA

Technical specifications

THE MICROPOINT NOVA

It is an Ergonomic Precision System

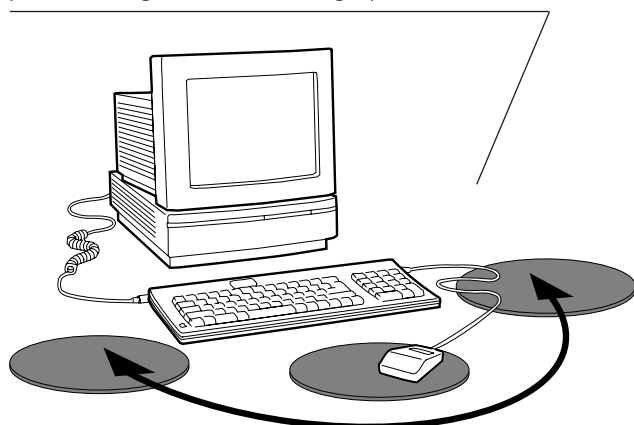

Surface : pyramid domes, four moulded sides.

Compact micro-cellular foam for tight adherence to any desktop.

Its slimness gives maximum comfort to the wrists and minimum inconvenience on the desktop.

Whether for right or left handed users : the round shape optimises the positioning in the working space.

Main qualities :

- Technicity
- Ergonomics

THE PACKAGING

Allows the product to be seen and touched

- Perma bond-design without gluing and therefore means no ungluing.
- 625 pyramid domes per cm² guarantee the pinpoint mouse accuracy without soiling it.
- The MicroPoint quality is guaranteed by Nova.
- Exclusively delivered in an individual packaging (standard size : 200 x 200 mm)
- Can be customized by screenprint technique.
- standard Format : diameter 195 mm, thickness 1,5 mm. The MicroPoint can also be shaped as requested.

Technical Documents to be provided

Micro Point NOVA

Screen Print

Line printing (inked color areas): no more than five colors.

We can make your films. Minimum required:

- Desired text and illustration layout in a $\varnothing 195\text{mm}$ standard format.
- Logos: as large and accurate as possible.
- Color samples or appropriate Pantone references.

If you provide a computer media:

[Please ask for our specification sheet.](#)

If you provide films for printing:

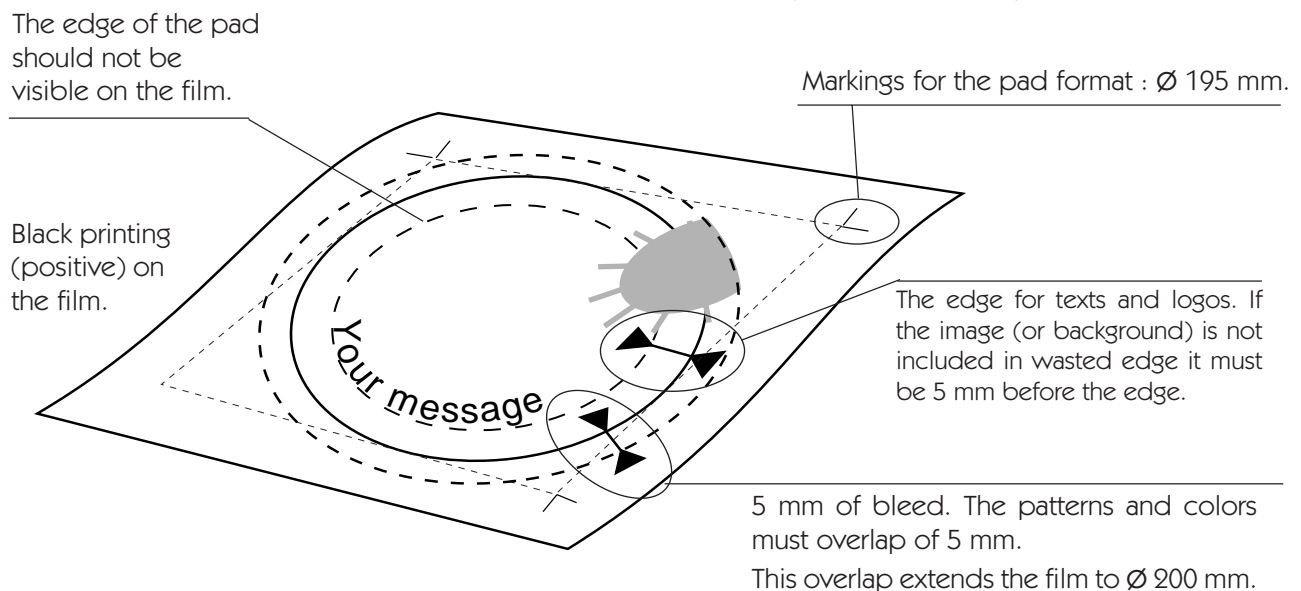

Be careful : If you send them by mail, pack them between 2 rigid cards.

Film is not just a transparency; it must be inactinic.

The edge of the pad should not be visible on the film.

Markings for the pad format : $\varnothing 195\text{ mm}$.

Black printing (positive) on the film.

The edge for texts and logos. If the image (or background) is not included in wasted edge it must be 5 mm before the edge.

5 mm of bleed. The patterns and colors must overlap of 5 mm.

This overlap extends the film to $\varnothing 200\text{ mm}$.

- Sensitive side on the reading side.
- Screen not accepted.
- 0.4 mm thickness for text and pattern lines.
- Determination of colors by Pantone references or samples.
- To print on a color background (other than white) and if a specific Pantone has been specified, provide a film to print the white (with 0.4 mm recessed edges). Otherwise, the Pantone reference will be approximate. Remember that the white film will increase printing cost since it is an additional color.
- An overlapping of 0.3 mm between the colors is necessary (or 1 point in typo-measure).

Caution ! because the NOVA mouse mats are printed on a coarse clear plastic surface, colour sharpness and brightness may vary slightly from original proof.
